Boston Circuits, Inc. New Release

Boston Circuits Invited to Present at MicroVentures, a Dow Jones VentureWire Conference
Conference is a Bellwether for Dynamic Chip Industry

Burlington, Mass. --Tuesday, September 27, 2005 – Boston Circuits Inc. ("BCI") announced today that Hiro Kataoka, president and chief executive officer, has been invited to present at the MicroVentures Conference. The Conference will take place on Tuesday and Wednesday, December 13-14 at the Hotel Sofitel San Francisco Bay in Redwood City, CA.

BCI has been selected to participate in this event, which, features the best in class of up-and-coming semiconductor companies. The focus of the Conference is to provide private and corporate investors, company executives, and entrepreneurs a balanced and fair view of which semiconductor-related technologies and services are well positioned for investment and partnership. To learn more about the MicroVentures 2005 Conference visit www.micro-ventures.com.

About Boston Circuits, Inc.

Boston Circuits, Inc. (BCI) is a fabless semiconductor company, specializing in multi-core embedded processors and software for next generation home and business multimedia devices. Using a new architecture called Grid on Chip™, processor cores are embedded into an on-chip network to enhance performance, reduce power consumption, and provide improved scalability. The gCORE™ family of multi-core processors integrates up to 16 processor cores with system components such as PCI Express and USB, giving customers an economical and flexible alternative to traditional embedded hardware. BCI's gCORE processors are supported by the company's patent pending GridWare™ technology, which simplifies software development by automatically distributing tasks to the multiple processor cores on the chip. Together, gCORE and GridWare comprise a powerful platform that fulfills the needs of multimedia devices in the Internet age.
